

What do I want to learn or understand better?

We are working a lot with improving our data structure in Firebase Firestore, and are contemplating switching to a MySQL database and using a hosted API. I am familiar with the second of these, but am looking forward to learning about the prior.

Also, I am unaccustomed to working using the Scrum framework but can see the potential gains of using it. I am curious about how working with it will progress.

How can I help someone else, or the entire team, to learn something new?

I have used Flutter before and am now quite used to Git. I have guided some team members through merges and such.

What is my contribution towards the team's use of Scrum?

I wrote some user stories and, more importantly, added acceptance criteria to multiple ones that were lacking.

Also, I pushed our group to start grading tasks with points as we hadn't done this yet.

What is my contribution towards the team's deliveries?

I have pushed multiple lines of code to our git repository.
