

What do I want to learn or understand better?

I believe that scrum is a very interesting framework, and I am looking forward to learning more about it. Furthermore, I am looking forward to becoming more proficient in Jira and Git, which we already have begun using. By the end of the course, I am hoping to become confident in my ability to use Git for version development and SCRUM as a project management framework.

How can I help someone else, or the entire team, to learn something new?

I am experienced in programming languages such as Java, Python, Dart, SQL and PHP. I am certain that this will prove useful for our team.

What is my contribution towards the team's use of Scrum?

I have participated in the exercises. Our team is yet to implement SCRUM.

What is my contribution towards the team's deliveries?

I have produced our social contract and organised signatures. Our team has not produced any other deliveries this week.
