

What do I want to learn or understand better?

Although I have used Flutter and Firebase before, I have not used the Live Database functionality in Firebase. I am looking forward to learning more about how to query Firebase, as this does not use SQL but uses collection, documents, and fields. I am unfamiliar to this setup but hope to become fluent in it soon.

Also, I am unaccustomed to working using the Scrum framework but can see the potential gains of using it. I am curious about how working with it will progress.

How can I help someone else, or the entire team, to learn something new?

I have used Flutter before, and my experience has already come in handy when helping others in setting up their IDE environments.

What is my contribution towards the team's use of Scrum?

I worked on multiple user stories by creating the basis for our Flutter application. This includes creating the first pages, navigation between these and testing the Firebase connection. I also made sure the project was added to GitHub.

What is my contribution towards the team's deliveries?

I have updated the Business Model Canvas and wrote most of "Customer Value and Scope" and helped with "Social Contract and Effort" in the Team Reflection.
